DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-5, 7-9, and 12-19 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claims 1-5, 7, 8, 18, and 19 are objected to because of the following informalities:
 - a. Regarding claims 1-5, 7, and 8, in claim 1, the phrase "a switch connected at the input of a first channel decoder" is suggested to be changed to "a switch connected at the input of the forward error correction circuit".
 - b. Regarding claims 18 and 19, in claim 18, the phrase "wherein said at least one maximum ratio combiner circuit and said plurality of channel decoder circuits are configured to receive said wireless signals from each of said plurality of communication channels" is suggested to be changed to "wherein said at least one maximum ratio combiner circuit is configured to receive said wireless signals from each of said plurality of communication channels and wherein said each of the plurality of channel decoder circuits are configured to receive said wireless signals from each of said plurality of communication channels".Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 9 recites **“wherein the wireless signals are processed by one of the plurality of channel decoder circuits, an encoder, a hard detection circuit, a pseudo bit error rate circuit, and a weighting algorithm.”** As shown in Fig. 5 of the instant specification, a wireless signal is processed by these components. However, claim 9 recites the wireless signals are received by communication channels in communication with respective channel decoder circuits. As shown in Fig. 5, there are no channel decoder circuits. After reviewing the specification (see sections 0027-0028), the specification does not describe wireless signals received by communication channels in communication with respective channel decoder circuits, wherein the wireless signals are also processed by one of the plurality of channel decoder circuits, an encoder, a hard detection circuit, a pseudo bit error rate circuit, and a weighting algorithm.
